The End Of The 6bone

- on 06/06/06, the 3FFE addresses allocated to the 6Bone test network have been returned to ICANN/IANA (rfc3701)
- this means: there are no official address holders from 3FFE anymore, anybody still announcing space is an address hijacker
- after a long time, the last 3FFE:xx: announcement in BGP disappeared after RIPE 55 - thanks! :-)
- still relevant: please stop using 3FFE transfer networks
- please do *NOT* give transit to 3FFE announcements!
- generalized: please apply proper BGP filters to your BGP customers, only accept “known” prefixes

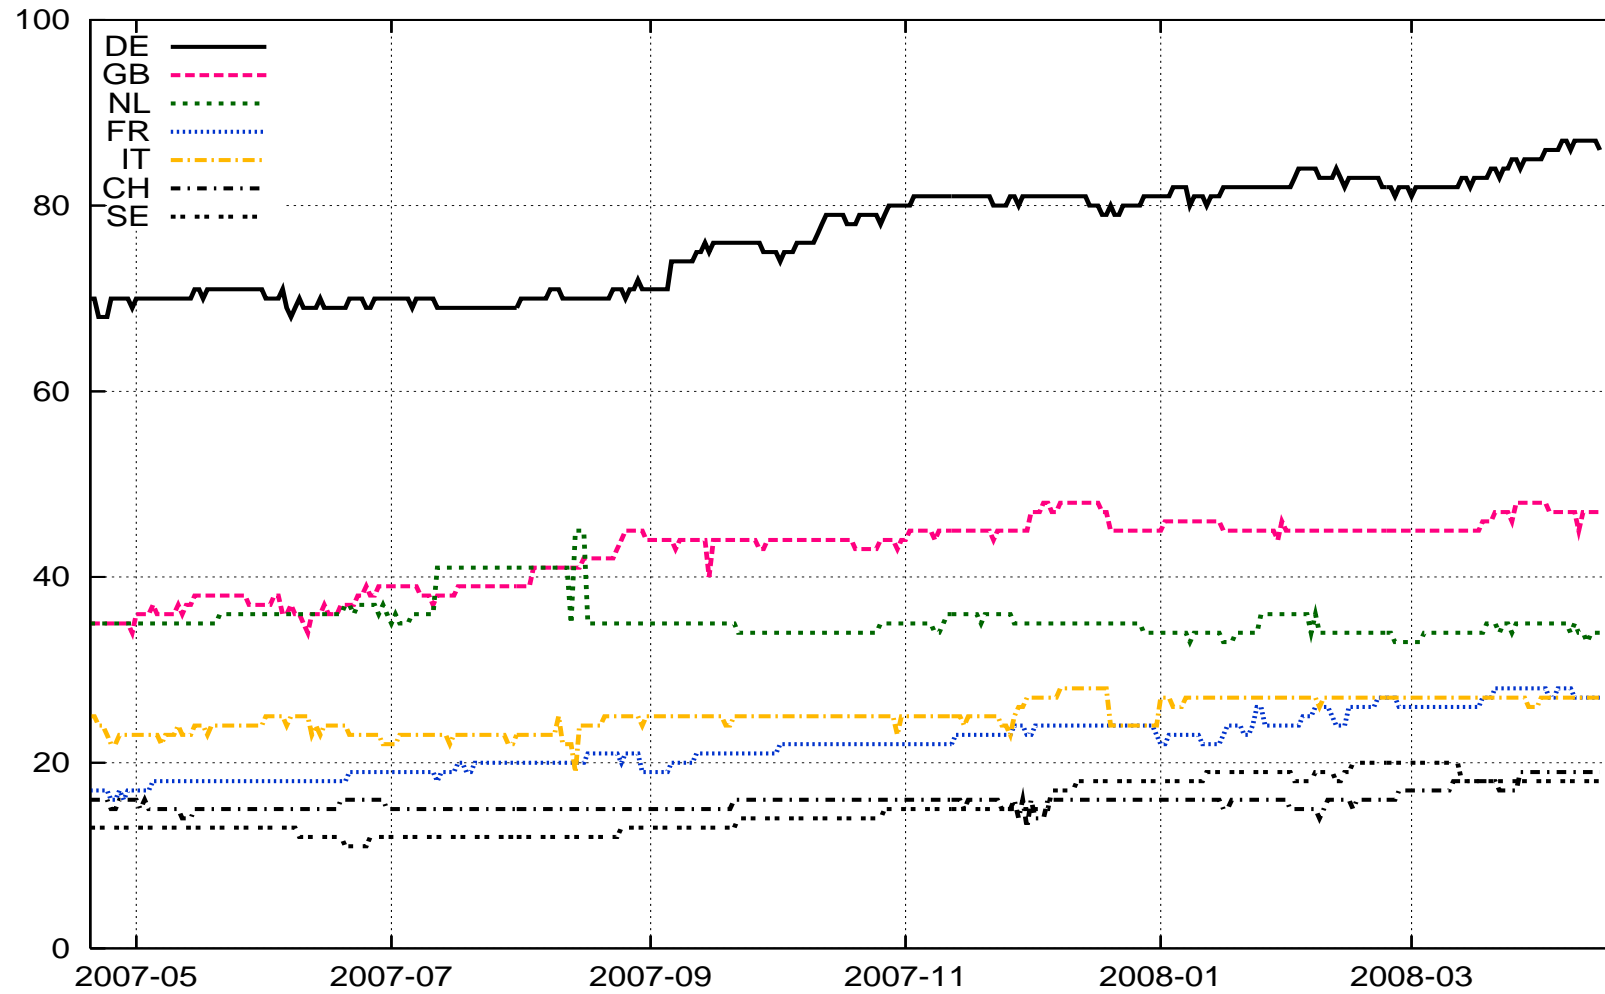

Graphics: trends? (RIR prefixes, 24 months)

Graphics: prefixes by RIR region

Graphics: prefixes by country (RIPE)

region special: IPv6 in MENOG3 region

Country, CC	LIRs	IPv6 alloc.	seen in BGP (up to 2008-04-11)
Bahrain .bh	18	1	-
Egypt .eg	(?)	4	2001:4220::/32, 2001:4300::/32
Iran .ir	39	10	2001:16c0::/32 (*)
Saudi .sa	52	2	2001:1490::/32
UAE .ae	8	1	2001:8f8::/32 until 2007/09 (?)
Qatar .qa	3	1	2001:1a10::/32
Oman .om	1	1	-
Turkey .tr	92	14	2001:a98::/32

- first IPv6 allocation went to AE in 09/2002 - congratulations!
- no IPv6 in IQ, JO, KW, YE, SY, LB and PS yet :(
- most of the IPv6 allocations not routed yet :-)

region special: IPv6 upstreams serving ME region

Numbers - AS numbers

- as of 2008-04-13: 917 unique AS numbers visible (2007-10: 798)
 - 641 origin-only ASes (no transit paths seen) (549)
 - 242 ASes originate & give transit (215)
 - 34 transit-only ASes (e.g. 57, 1239, 5549, 6667, ...) (34)
- different number of prefixes announced
 - 0 ASes originate 6Bone (3ffe) prefixes (*hooray!*)
 - 763 ASes originate 1 RIR prefix (672)
 - 72 ASes originate 2 RIR prefixes (3 due to /32+/35)
 - 25 ASes originate 3 RIR prefixes
 - 23 ASes with “more than that”, maximum is 34 prefixes
- 3 ASes still announce their prefix as /32 and /35
- note: all paths observed from AS5539

ASes - why are people announcing 2+ prefixes

- /35 to /32 migration: 2 RIR prefixes, *temporary (?)*

Allocated vs. Routed - reasons?

- “early adopters” already losing interest in IPv6?
- “prepare for the future” allocations?
- “for internal use” allocations? (some, yes)
- distribution of non-announced prefixes does not show any specific characteristic, like “academia” vs. “commercial networks” etc.
- some delay between prefix allocation and announcement is to be expected (expect some more statistics in this space...)
 - but this cannot explain effects seen on 2003+2004 allocations – about 40% don’t show up after over 3 years...

Graphics: route6 objects vs. routes seen

route6 correlation (RIPE region)

- on 2008-04-15:
 - 488 BGP routes from RIPE region
 - 607 route6: objects in RIPE DB
- correlation?
 - multiple origin route6's (10x 2002::/16, 5x 2001::/32, ...)
 - ⇒ 587 route6 objects for *unique* prefixes
 - 346 route6: objects exactly matching a prefix in BGP
 - * (origin AS not checked yet, only prefix match)
 - 241 route6: objects without BGP prefix (?!)
 - 137 BGP prefixes without route6: object :-)
- ⇒ close-up view shows “more work needed”
- in other RIR regions, situation is worse (no IRR DBs yet, etc.)

route6 object example

- it's as easy as this...

```
route6:      2001:608::/32
descr:      DE-SPACE-2001-0608
descr:      SpaceNET AG, Munich
origin:     AS5539
notify:     noc@space.net
mnt-by:     SPACENET-N
changed:    gert@space.net 20041230
source:     RIPE
```

- strongly recommended, helps upstream/peer ASes build decent BGP filters, based on IRR data
